Vancouver, June 27, 2022

Dear Ms Miffen-Mitchell,

My name is Johannes Weber and I'm a May 2022 LighthouseLabs grad seeking to transition from Live- and Broadcast-Production to a web development role. During the course I particularly enjoyed learning modern JS and React, testing strategies, RESTful API development, as well as remote collaboration with github. I came across your job posting on LinkedIn and would like to apply for the React developer role.

I have been passionate about networks and coding since my teenage years and love writing software (and sometimes designing hardware) to solve problems, automate processes or otherwise streamline tasks using a LAMP stack (in the old days) or Node/Express/React (more recently).

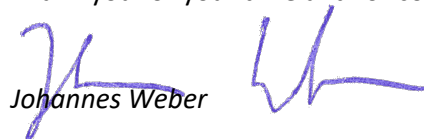

A recent example where I used my development skills to solve a challenge at work is the [Tally](https://github.com/jowe81/tally) project (<https://github.com/jowe81/tally>). It leverages the RaspberryPi GPIO interface, Node/Express, MQTT, and a previous project to provide tally functionality to our broadcast camera operators. Feel free to refer to the links on my resume if you would like to check out more of my projects.

Transferrable skills from my current and previous roles include managing volunteer and staff teams, reliably delivering projects on tight schedules, overseeing real-time operations, and designing creative solutions for complex requirements.

I am really excited about your commitment to holistic team development as caring for the people I work with is one of my most important priorities in my current role at Tenth Church.

If you have any questions, please do not hesitate to contact me. I am looking forward to connecting with you and to learn more about the role and about silverorange.

Thank you for your time and for considering my application,

Johannes Weber
